Last update: Dec 06, 2023

## **EDUCATION**

1995/08 – 1998/11	Ph.D.	Department of Marine, Earth, and Atmospheric Sciences, North Carolina State Univ., USA
1988/09 – 1990/06	M.S.	Institute of Marine Geology, National Sun Yat-sen Univ., Taiwan
1984/09 – 1988/06	B.S.	Department of Oceanography, National Taiwan Ocean Univ., Taiwan

## **EMPLOYMENT**

2022/05 – present	Research Fellow, RCEC, Academia Sinica.
2020/01 – 2022/04	Distinguished Professor, National Taiwan Normal Univ.
2013/07 – 2015/12	Research Chair Professor, National Taiwan Normal Univ.
2009/08 – 2022/04	Professor, National Taiwan Normal Univ.
2007/08 – 2008/07	Visiting Scientist, Program in Atmospheric & Oceanic Sciences, Princeton Univ.
2005/08 – 2009/07	Associate Professor, Depart. of Earth Sciences, National Taiwan Normal Univ.
2001/02 – 2005/07	Assistant Professor, Depart. of Earth Sciences, National Taiwan Normal Univ.
1999/02 – 2001/01	Postdoc Researcher, Institute of Marine Sciences, Univ. of Southern Mississippi

## **HONORS & AWARDS**

2016	Outstanding Faculty Service Award, National Taiwan Normal Univ.
2012 – 2014	Outstanding Research Award, National Science Council.
2012	Outstanding Research Award, National Taiwan Normal Univ.
2010 – 2015	Research Excellence Award, College of Science, National Taiwan Normal Univ.

## **PROFESSIONAL SERVICE**

- Editorial Board Member, *Scientific Reports* (SCI), 2018 – present
- Guest editor, *Journal of Geophysical Research: Oceans* (SCI), 2020 – present
- Guest editor, *Water* (SCI), 2021 – present
- Guest editor, *Sustainability* (SCI), 2018 – 2020
- Editor-in-Chief, *Journal of Research in Education Sciences* (Scopus), 2013 – 2018
- Guest editor, *Estuarine, Coastal and Shelf Science* (SCI), 2013 – 2015
- Associate editor, *Ocean Dynamics* (SCI), 2009 – 2010
- Associate editor, *Terrestrial, Atmospheric and Oceanic Sciences* (SCI), 2009 – 2012

## **RESEARCH INTEREST**

I have developed numerous models with different integration domains and resolutions to study ocean circulation over the North Pacific. These models are now routinely used, not only for process studies to uncover dynamics and mechanisms, but also (in conjunction with field/satellite data) for ocean predictions and to help analyze and explain observations. In recent years, I have made substantial further advancement in the climate impact on the ocean current and marine life. It is demonstrated that global climate change/variability plays an essential role on modulating regional ocean circulation. Several new findings and their associated mechanisms have been published recently. For example, we found out a systemwide weakened Kuroshio despite enhanced warming along its path, updating the earlier argument of an accelerating Kuroshio under the global warming. We also pointed out interannual variability in the eel catch in East Asia is strongly correlated with the combination mode (C-mode), but not with ENSO. In addition, we demonstrated that the North Atlantic warming is the ultimate forcing leading to changes in the atmospheric and oceanic circulation over the North Pacific.

## **RESEARCH HIGHLIGHTS**

- A. The profound influence from the North Atlantic on the Tropical Pacific has been a primary focus. We conducted observational analyses and numerical modeling experiments to show that the North Atlantic has also strongly influenced the Extratropical North Pacific. A rapid and synchronous change in the atmospheric and oceanic circulations was observed in the North Pacific during the late 1990s. The change was driven by the transbasin influence from the Atlantic. During the positive AMO phase since the 1990s, the anomalously warm North Atlantic triggers a series of zonally symmetric and asymmetric transbasin teleconnections involving the ITCZ (Intertropical Convergence Zone), Walker and Hadley circulations, and Rossby wave propagation that lead to a decrease in wind stress curls over the Pacific subtropics, resulting in an abrupt weakening in the North Pacific subtropical gyre and Kuroshio.
- B. The Japanese eels migrate long distances and spawn to the south of the salinity front in the NEC during new moon periods. It has been reported the salinity front has extended farther south, which has shifted the eel's spawning grounds to a lower latitude, resulting in smaller eel catches in 1983, 1992, and 1998. We demonstrated interannual variability in the eel catch is strongly correlated with the combination mode (C-mode), but not with ENSO. The spawning grounds accompanied by the salinity front extend farther south during the C-mode of climate variability, and eel larvae fail to join the nursery in the NEC, resulting in poor recruitment in East Asia. The C-mode is a previously neglected mode of climate variability generated by the nonlinear interaction between ENSO and the annual cycle in the western Pacific warm pool. Furthermore, we propose an appropriate SST index to project the eel catch in East Asian countries.
