

Curriculum Vitae

Last update: June 2022

Yi-Ying Chen 陳奕穎

Assistant Research Fellow

Research Center for Environmental Changes (RCEC), Academia Sinica (AS)

No. 128, Sec. 2, Academia Rd., Nankang, Taipei, Taiwan, R.O.C.

Office Tel: [+886-2-2787-5833](tel:+886-2-2787-5833); Email: yiyingchen@gate.sinica.edu.tw

Webpage: <https://sites.google.com/view/hydrolab/>

EMPLOYMENT

- 2022-Feb — present Adjunct Assistant Professor, Dept. Land Economics, NCCU, Taiwan
2016-Aug — present Assistant Research Fellow, RCEC, Academia Sinica, Taiwan
2016-Apr — 2016-Jul Post-Doctoral Researcher, National Central Univ., Taiwan
2015-Aug — 2016-Mar Post-Doctoral Researcher, National Univ. of Singapore, Singapore
2014-Jan — 2015-Jul Post-Doctoral Researcher, LSCE/IPSL, CEA, France
2012-Aug — 2013-Dec Post-Doctoral Researcher, National Central Univ., Taiwan

EDUCATION

- 2007-Sep — 2012-Aug Ph.D. Graduate Institute of Hydrological and Oceanic Sciences, National Central Univ., Taiwan
2002-Sep — 2004-Aug M.S. Institute of Hydrological Sciences, National Central Univ., Taiwan
1998-Sep — 2002-Aug B.S. Department of Hydraulic Engineering, Feng-Chia Univ., Taiwan

HONORS & AWARDS

- Outstanding Review Award (2022), *Terrestrial Atmospheric and Oceanic Sciences*
TWAS Young Affiliates Nominations (2020)
Annual Research Highlight (2019), RCEC, AS
Outstanding Review Award (2018), *Journal of Hydrology*
The Phi Tau Phi Scholastic Honor (2012), R.O.C.
Dean List, College of Earth Science (2012), National Central Univ.
Conference Travel Grant (2009 & 2011), National Science Council
Doctoral Degree Scholarship (2007), National Central Univ.

ACADEMIC SERVICE

Editorial board/Reviewer:

Guest Editor/*Frontiers in Forests and Global Change*, Special Topic: Living with Tropical Storms in a Changing Climate · *Frontiers in Water* · *Frontiers in Forests and Global Change* · *Geoscientific Model Development* · *Biogeoscience* · *Journal of Geophysical Research* · *Water* · *Forests* · *Terrestrial, Atmospheric and Oceanic Sciences* · *Nature Communication* · *Journal of Hydrology* · *Theoretical and Applied Climatology* · *Forest Ecology and Management* · *Frontiers in Forests and Global Change*

RESEARCH INTERESTS

Land surface processes · Environmental disturbances and climate change

RESEARCH HIGHLIGHTS

Reconstructing Taiwan's land-use/land-cover changes: A new reconstitution of Taiwan's land cover changes and its uncertainty between 1904 and 2015 is presented. The reconstruction which integrates geographical information from historical maps and satellite images from SPOT is spatially explicit with a 500 m by 500 m resolution and distinguishes six land cover classes: forests, grasslands, agriculture land, inland water, built-up, and bare soil. This type of information is essential to quantifying the contribution of climate warming from land cover changes by making use of a modeling approach, which is also in line with the large-scale land cover reconstruction in Europe. The new land cover reconstruction is thus expected to contribute to future revisions of global land cover reconstructions as well as to studies of (gross) land cover changes, the carbon budget, regional climate, urban heat islands, and air and water pollution at the national level.

Simulating the storm damage to forests: Abrupt increases in tree mortality due to wind disturbance have been added into an Earth system model. A new module calculated the critical wind speeds for stem-break and overturning by developing numerically efficient solutions to deal with (1) landscape heterogeneity i.e. accounts for newly established forest edges for the parameterization of gusts; (2) downscaling spatially and temporally aggregated wind fields to obtain more realistic wind speeds that would represent gusts; and (3) downscaling storm damage within the 2,500 km² pixels. This new module was parameterized and was tested over Sweden. The new model version can capture the dynamics of forest structure due to storm disturbance on the regional scale. Model parameters for various tree species are expected to be refined by using a pan Europe wind disturbance dataset. The new model is also used to study the impact of various environmental disturbances including land managements on regional forest biomass (standing wood volume) change in Taiwan.
